RESOLUTION

ON THE

Report on the Prison Administration of Burma

FOR THE YEAR 1928.

Extract from the Proceedings of the Government of Burma (Judicial Department), No. 167Z29, Part I, dated the 26th June 1929.

READ—

The Report of the Inspector-General of Prisons on the Administration of Prisons in Burma during the year 1928.

RESOLVED THAT—

The Report be published.

By order of the Governor in Council.

H. F. SITZLER,
Offg. Secretary to the Govt. of Burma,
Judicial Department.

[The maximum limit of the body of the Report is 30 pages.]

Report

ON THE

Prison Administration of Burma

For the Year 1928.

CHAPTER I.

JUDICIAL.

The year opened with 8 Central Jails, 22 District Jails, 1 Subsidiary Jail and 1 Camp Jail at Alôn in the Lower Chindwin District. The subsidiary jail at Pegu was taken over by the Prison Department on the 1st March, but was retransferred to the Police Department on the 10th November 1928, as its management, with an inadequate staff, rendered it insecure; statistics relating to this subsidiary jail are, therefore, not included in the Report. The Subsidiary Jail at Kyaikto was brought under the control of the Prison Department with effect from 16th June 1928. The necessary structural alterations to the Police Lock-up at Pyapôn not having been completed, it has not yet been converted into a subsidiary jail. At the close of the year the subsidiary jail at Pakôkku remained under Police control, but it will, in the near future, be made over to the Prison Department. The Police Lock-up at Mawlaik has not yet been taken over as a subsidiary jail. A camp jail was opened at the Mokpalin Quarries with effect from the 1st April. At the close of the year, there were thus 8 Central Jails, 22 District Jails, 2 Subsidiary Jails and 2 Camp Jails. As regards the project of constructing an institution at Meiktila capable of serving as a hospital for a hundred tubercular patients and a hundred leper prisoners, the necessary site has not yet been selected for the purpose.

General Summary.

2. *Distribution of Prisoners of all Classes.*—The number remaining at the close of the previous year *plus* the number received during the year under review yielded a total of 73,329 (69,552). The number discharged from all causes being 52,057 (49,348), there remained at the close of the year 21,272 (20,204) prisoners of all classes with a daily average of 20,644 (19,347). This number was the highest ever reached in this Province and was in excess of the accommodation provided. In addition to the constant anxiety caused by overcrowding,

such a large number entailed no small tax on the already overworked staff. Amongst other factors, the overcrowding also affected the mortality adversely as will be seen in Chapter III.

3. *Admission and disposal of Convicts.*—At the commencement of the year there remained 18,517 (17,052) convicts, and 23,146 (22,945) were imprisoned during the year, making a total of 41,663 (39,997). Excluding transfers, the convicts were disposed of as follows :—

Statement I.

Released (1) on appeal 2,212 (2,105), (2) on expiry of sentence 8,507 (8,510), (3) under the Remission Rules 9,608 (9,177), (4) by order of Government (*a*) on account of sickness 30 (21), and (*b*) on other grounds 775 (917), volunteers sent to Port Blair for miscellaneous services 139 (443), transferred to Mental Hospitals 8 (23), escaped but not recaptured during the year 9 (18), executed 84 (144) and died 489 (320). The number remaining at the close of the year was 19,821 (18,517), and the daily average was 19,147 (17,936). The 775 releases effected by order of Government on other grounds are made up of 351 conditionally liberated on the recommendations of the Central Revisory Board, 301 for ticket-of-leave employment under the Public Works Department, 61 prisoners repatriated to China, 24 transferred to the Salvation Army Juvenile Adult Criminal Institution, and 17 releases under the "Fourteen-year Rule", the remaining 21 being miscellaneous other releases.

4. *Religion, Age, Education and previous Occupation*—

Statement II.

(*a*) *Religion.*—Of 23,146 admissions, 84·13 per cent. were Buddhists, 4·86 per cent. Mahomedans, 3·61 Hindus, and 0·51 per cent. Christians, while all other denominations accounted for 6·89 per cent.

Compared with the previous year, the ratio for "Buddhists" and "All other classes" shows a slight rise, while other denominations exhibit a small decrease.

(*b*) *Age.*—Owing to the larger number of admissions than in the previous year, there was an increase under all categories of age except 16 to 18 years and 22 to 30 years, the increase being most marked under 31 to 40 years, 19 to 21 years and 41 to 60 years.

I regret to record the fact that the number of youths under 16 committed to jail rose from 93 in 1927 to 143 in the year under review, thus emphasizing the need for the early introduction of the probation system and training schools under which nearly all of these youths could have been disposed of, instead of being sent to jail where the environments are certainly not conducive to the reformation of juveniles.

(*c*) *Education.*—Only 21·68 per cent. (23·49) of the admissions were illiterate, 78·45 per cent. (76·51) representing the number of literate prisoners. These figures would appear to indicate that, generally speaking, education is more advanced in Burma than in the other Provinces of India.

At five of the Central Jails the experiment of providing schools was continued, the object being to impart secular education. The subjects taught were confined to reading, writing, simple arithmetic, elementary geography, history, and periodical health lectures. The results for the year were very satisfactory, and in submitting a summary of them to the Local Government, sanction was sought to the permanent retention of the staff of five teachers now employed, these being supplemented by specially selected well-behaved, educated convicts ; but, owing to financial stringency, the Local Government was unable to comply with the recommendation made. Sanction was, however, accorded to the continued employment of the staff in question for a further period of one year with effect from the 1st March 1929. In the five jails where teachers are employed, education of prisoners up to the age of 25 is compulsory. Every country that has introduced this measure (it is no longer an experiment) has had nothing but good results. As Burma is no exception to this general rule, it is hoped that it will be possible, in the future, to make primary education a regular feature in all large jails.

(*d*) *Previous Occupation.*—Compared with the year 1927, there was a marked increase in the number engaged in agriculture and with animals ; there was also a small rise of 71 in the number engaged in commerce and trade. A satisfactory decline is noticed under the heads "Persons in service or performing personal offices," "Miscellaneous persons not classed otherwise" and "Persons employed in mechanical arts, manufactures and engineering operations, etc," the decrease being 733, 552 and 408, respectively. Compared with the previous year, the number of females convicted is unusually high, the figures being "Married" 489 (410) "Prostitutes" 26 (7), "Widows" 67 (51) and "Unmarried" 61 (53). I regret not being in a position to offer any explanation of this increase.

5. *Nature and length of sentences and the number remaining.*—The percentage sentenced to simple imprisonment was 5·98 (5·05), to rigorous imprisonment 90·44 (93·31), to rigorous imprisonment with solitary confinement 1·61 (1·22), and to rigorous imprisonment with whipping 1·97 (0·42). Of the total number admitted, 136 (191) were sentenced to death, 176 (172) to transportation for life and 7 (11) to term transportation. Of the number remaining in jail at the close of the year, 23 (23) were sentenced to death, 970 (835) to life transportation and 473 (178) to term transportation. As many as 1,384 (1,158) were sentenced to simple imprisonment which means that, as none of such prisoners elect to work, they sit idle the whole day long and have to be maintained at the expense of Government. It therefore seems desirable that this award of punishment should either be abolished or be replaced, in the alternative, by imprisonment with light labour.

Statement III.

As mentioned in my Report for 1927, the law relative to whipping was amended during that year. The result has been a welcome increase in the number sentenced to whipping. During the year under report 456 prisoners were awarded whipping as against 61, 50 and 96 during the years 1925, 1926 and 1927, respectively.

6. *Number of recidivists.*—6,892 (7,275) or a percentage of 29·78 (31·71) had been previously convicted of offences indicating confirmed criminality. This number included 883 (1,428) committed to jail for the first time in default of finding security under section 110 of the Criminal Procedure Code. Of the remainder, 1,862 (2,032) had one previous conviction, 1,826 (1,591) two previous convictions and 2,321 (2,224) more than two previous convictions; 1 (3) out of the 13 (13) youthful offenders was identified as having had previous convictions.

Statement IV.

Table E.

7. *Admission of Habituals.*—The number of convicts identified and classified as habituals was 7,061 (7,344) or 30·51 (32·01) per cent. of the total admissions; 101 (139) were identified by Superintendents of Jails, 23 being accounted for at Yamèthin, 22 at Rangoon, 19 at Moulmein and 13 at Magwe. This points to the fact that most jails do not pay attention to this important matter of classification and their attention will be drawn to this omission.

Statement V.

8. *Escapes and Recaptures of Convicts.*—There were 44 escapes, four from inside and forty from outside the jails, these latter having absconded while employed extra-murally. Of the 44, as many as 35 were recaptured before the close of the year, while 4 were subsequently arrested and conveyed to the jails to which they belonged. Central Jails contributed 15, District Jails 18, and Camp Jails 11 of the escapes. The departmental enquiries revealed that, as usual, nearly all the escapes which occurred from outside the jail were due to negligence on the part of the warder guard in allowing the prisoners to get out of sight, and in not frequently verifying the number in their charge. The warders who were remiss in their duties were suitably dealt with by being sent up for trial, and, in a few cases, where it was not possible to obtain a conviction, they were dealt with departmentally. The following is a brief account of the four escapes which occurred from inside the jail :—

(*a*) *Mokpalin Camp Jail.*—On the 17th July 1928, a convict night watchman and an ordinary prisoner broke the top rings of their fetters and thus succeeded in freeing themselves of their belchain. Wrenching a strand of the barbed wire mesh fixed between the sleeping platform and the floor of the ward, they got out of the dormitory. The two prisoners then made a small opening in the ward enclosure fence and reached the outer fence unnoticed by the warders on duty. By breaking a couple of the wire ties and stretching the wires apart, they succeeded in getting through the outer fence at about 2-30 a.m.; but it was at this psychological moment that the sentry on duty caught sight of the prisoners. He promptly raised the alarm with the result that one of the fugitives was recaptured on the spot, while the other disappeared into an adjoining jungle. He was, however, rearrested and brought back to jail the following day. On being sent up for trial each of the prisoners was awarded six months' rigorous imprisonment. In this case, the warders on duty were not punished in view of the fact that no negligence on their part was revealed.

(*b*) *Mogôk District Jail.*—Between 12 midnight and 3 a.m. on the 12th November 1928, two prisoners got away by sawing off one of the lower wooden bars of the palisading of the ward in which they were confined. Through the opening thus made they squeezed themselves and got on to the verandah of the ward. They then made their way to the hospital section. At one portion of the enclosure thereto, which is not in sight of the sentry on duty, they succeeded in scaling the main wall by means of three pieces of bamboo firmly tied together and fixed to the top of the wall by a large iron hook removed from the blacksmith's shop. Having reached the top of the wall, they used the same contrivance for descending outside ; the fogginess of the morning facilitated escape. One of the prisoners was arrested and brought back to jail on the 22nd January 1929. On being sent up for trial, he was awarded two years' rigorous imprisonment. Two prisoners, who connived at the escape, and two jail warders who were on duty at the time, were prosecuted ; the former were sentenced to thirty stripes each. Of the two warders, one was fined Rs. 50 and the other one acquitted.

Statement VI.

9. *General behaviour of prisoners.*—The number of offences dealt with by Criminal Courts was 113 (81), *viz.*, assaults 38 (36), escapes 35 (37), striking work 34 (*nil*) and possession of prohibited articles 6 (8). With a large rise in the daily

average population, there was inevitably a general increase in the number of offences dealt with by Jail Superintendents, *viz.*, those relating to work, to prohibited articles, to assaults, mutiny and escapes, and all other breaches of Jail Rules. Except for " warnings " there was an all-round decrease in the number of minor punishments inflicted by the Jail Superintendents. On the other hand, the number of major punishments shows an increase under all heads except " Penal diet with cellular confinement exceeding 48 hours." It is to be hoped that this is an indication that major punishments were more freely resorted to with the object of improving discipline. The ratio per cent. of minor punishments and of major punishments to the daily average convict population was 41·24 (44·14) and 29·57 (27·39), respectively, the ratio of the grand total of punishments being 71·40 (71·98). The awards of whipping compared with the grand total of punishments were 0·55 (0·46) per cent.

Of the 38 assaults dealt with by Criminal Courts, 24 were committed on fellow prisoners, of whom 10 were convict officers, 12 on paid warders, one on an Assistant Jailor and one on a subordinate working in the Branch Press attached to the Rangoon Jail. A brief account of the five assaults which proved fatal is given below :—

Rangoon.—(*a*) While a convict overseer was searching prisoners returning from a workyard preparatory to having their evening meal, one of them assaulted the convict officer on his head, the weapon used being an iron rod weighing 1½ lbs. The injured man was attended to in the Jail Hospital, being subsequently removed to the General Hospital for surgical treatment. He died the following day. The assailant was awarded a life sentence.

(*b*) Between 12·30 and 1 p.m. a convict night-watchman went from No. 8 to No. 9 cane shed and asked the keyman to open the gate. The latter refused, and subsequently words passed between them. They finally sent for a convict warder on duty in No. 8 shed, and the convict night-watchman told him that gambling was going on in No. 9 shed, and that he wanted to raid it. On an order from the convict warder, the keyman opened the gate and all three went into that shed, when the convict night-watchman caught the keyman by the neck, at the same time saying : " Come on, I will show you the gambling." Hereupon, a convict of the non-habitual class, undergoing a sentence of life transportation for murder, suddenly got up without saying anything, and chased the convict night-watchman in the direction of workshed No. 6, where he was overtaken and stabbed from behind by the convict. The knife used on the occasion was found broken ; but the person who broke it could not be discovered. The injured man died within fifteen minutes. On being sent up for trial under section 302 of the Indian Penal Code, the alleged assailant was acquitted by the High Court of Judicature at Rangoon.

Myaungmya.—Using a wooden mallet, a prisoner struck a fellow convict employed on cane work. The blow, which fell on the convict's head, caused him to stagger and fall against the foot of the chair he was engaged in making at the time. He was promptly removed to the Jail Hospital, but succumbed the following day at 4-15 a.m. The departmental enquiry into the assault went to show that the deceased and the assailant were not on good terms owing to jealousy over another prisoner with whom both were intimate. The assailant was sentenced to transportation for life.

Myingyan.—With the leg of a wooden cot, a convict assaulted a fellow prisoner, at 2-15 p.m., causing four external injuries on the head, with comminuted fracture of the skull. The victim died soon after receiving the injuries. There was an old standing grudge between these two prisoners when they were employed on ticket-of-leave. Both were remanded to the Myingyan Jail for breach of conditions of release, and there a fresh quarrel arose between them over bartering a cup of curry ; this culminated in a fatal assault. The culprit was sentenced to death. On appeal to the High Court of Judicature at Rangoon, the sentence was altered to one of transportation for life.

Prome.—A convict night-watchman, while employed in the carpentry shed, assaulted a paid warder, hitting him on the head with a piece of wood, 3 feet long and 2 inches thick. The injured warder was removed to the Jail Hospital and was

subsequently conveyed to the Civil Hospital for surgical treatment, but died there a week later. The assault is believed to have been the outcome of revenge over the warder having, on the day previous, squeezed the convict night-watchman's neck for being in possession of a quantity of tobacco. According to evidence given at the trial, the warder demanded money from the convict night-watchman; but, as there were a number of discrepancies in the prisoners' statements, the evidence was discredited. The assailant was awarded a life sentence.

Magwe.—At about 2 p.m. four prisoners combined together and brutally assaulted the head warder and another paid warder, both of whom died from the effects of the injuries received. The weapons used were an iron rod, a chisel and a large sized hammer belonging to the carpentry shed where the prisoners were working at the time. On being sent up for trial, the assailants pleaded that the head warder and the warder in question constantly demanded money from them; the four prisoners said that, on this particular occasion, as no money was forthcoming, the warders illtreated them and thus provoked the assault. This allegation, however, was not corroborated by the evidence of the prisoner witnesses in the case. On the 14th January 1929, three of the assailants were sentenced to death and the fourth to transportation for life.

10. *Corporal Punishments.*—The number of these awards rose from 41 in 1926 and 67 in 1927 to 83 in the year under report. Of the whippings, 66 were inflicted for assaults, 5 each for contumaciously refusing to work, for conspiring to escape from lawful custody, and for other serious offences against discipline, and 2 for attempting to escape from the jail garden. Of the sixty-six assaults, twenty-two were committed on fellow prisoners, nineteen on convict officers, sixteen on paid warders and nine on jailors. These assaults were not of such a serious nature as to warrant the offenders being sent up for trial, and were adequately dealt with by the administration of whipping.

There are now two Camp Jails, *viz.*, one at Alôn in the Lower Chindwin District, and the other at Mokpalin in the Thatôn District. Prisoners of the habitual class to the number of 486 and 1,262, respectively, have been drafted to these Camp Jails where the work is found extremely distasteful as was borne out by a strike which occurred at Alôn among a batch of 45 prisoners received on transfer from the Insein Jail. The strike, into which I personally enquired on the spot, appeared to have been organized by five ringleaders who claimed that, before leaving the Insein Jail, they were informed that they were being sent to work on ticket-of-leave under the Public Works Department and that they would be paid for their labour. These prisoners are old habituals, well acquainted with Jail Rules, and there is no doubt that their story was an invention made in the hope that they would be sent back to an ordinary jail, thereby escaping the hard labour of stone-breaking at the Camp Jail. All attempts to induce the prisoners to work having failed, the Superintendent of the Camp Jail reported the matter to the District Magistrate, Lower Chindwin District, with the ultimate result that the strikers, thirty-four in number, were sent up for trial, and sentenced to awards of whipping. This accounts for the rise, from 81 in 1927 to 113, in the number of cases dealt with by Criminal Courts. Two satisfactory features of the incident were that no violence was resorted to, and the strike was confined to the new arrivals from the Insein Jail, and did not spread to the prisoners previously confined in the Alôn Camp Jail.

The Local Government approved my proposal to confine dangerous and refractory prisoners in cells at the Moulmein Jail, which is provided with a cellular block for the accommodation of 120 prisoners, and sanction was accorded to the entertainment, as a temporary measure for one year, of an assistant jailor, a head-warder and nine warders to guard those prisoners. The total number of such prisoners received by the Moulmein Jail, during the year, on transfer from other jails, was 93.

The Superintendent of that Jail reports that the conduct of these prisoners was, on the whole, good with the exception of a few who ventured to show off that they were unmanageable; but their temper was soon curbed and they were afterwards kept under the strictest discipline. A few of these prisoners were, after a period of trial, kept outside in the cell enclosure and were made to assist the special staff in distributing food and doing garden work, and other odd jobs. Eight other prisoners were sent out to the work-yard, and no complaint was received against any of them as regards their conduct. The result of this measure has so far been satisfactory, with the exception of a disturbance that took place after the close of the year and which was soon quelled. What we are attempting to do is to keep all refractory prisoners under close supervision in one jail instead of allowing them to undermine the discipline of all jails. The responsibilities of the management of the selected jail are no doubt increased, but there is a corresponding relief afforded to all other jails. The Moulmein Cell Block is already dreaded by prisoners who are potentially refractory, and I trust that this measure will succeed in reducing their number to vanishing point. My thanks are due to Lieut.-Col. H. A. Williams, D.S.O., I.M.S., Superintendent of the Moulmein Jail, for the interest he has taken in making a success of the scheme for confining, in that Jail, prisoners of a class who are considered to be unmanageable in other jails. It is my intention to circularize all Jail Superintendents sending them extracts from the Administration Report on the Moulmein Jail for 1928, which contains a lot of instructive matter for dealing with refractory and dangerous criminals.

As mentioned in the Report for 1928, the duty of the special patrol party sanctioned for the Insein Central Jail, which is reserved for habituals, is to prevent wandering or straggling, to help in searching and to be generally available whenever there is any sign of disturbance. The party consists of two retired Indian Army Officers and six pensioned Sepoys. The patrol is reported by the Superintendent of Jail, Insein, to be very useful in preventing the prisoners loitering and unauthorized traffic between the various sections of the jail. The unexpected appearance of the patrol in different parts of the jail keeps prisoners on the alert and discourages unlawful concourse, which, in turn, militates against the planning of serious breaches of discipline. One striking feature of the management of the Insein Jail during the past year is that offences relating to assaults, mutiny and escapes fell from 146 in 1927 to 113 in

the year under review, and the number of offences dealt with by Criminal Courts was only 1 (9)—an assault case.

Proposals for improving the warder staff were submitted to the Local Government during the year. It is understood that the Punjab Government has been addressed on the subject. The scheme is to recruit ex-military men from India for appointment as warders, and the Police authorities at Lahore have kindly agreed to assist in the matter.

The scheme for providing a special clerical staff for jails, so that the jailor staff may be able to devote more time and attention to the supervision of prisoners, is still under consideration.

11. *Conduct of Habituals.*—The daily average of this class was 7,819 (8,243) and they formed 40·84 (45·96) per cent. of the convict population. They were awarded 8,092 (6,819) out of the total number of punishments, *viz.*, 13,671 (12,910). They also accounted for 79 out of the 113 offences dealt with by Criminal Courts, and for 37 of the 75 awards of corporal punishment. Habituals were responsible for 402 or 52·07 per cent. of the offences relating to assaults, mutiny and escapes.

Statement VII.

12. *Prison Officers.*—Of the daily average convict population, which numbered 18,989 (17,778) males and 158 (159) females, 3,423 males or 18·03 (17·27) per cent. and 6 females or 3·80 (9·43) per cent. were employed as convict officers. The aggregate number so employed was 6,624 (6,666) males and 24 (29) females. The number reduced to a lower grade, or otherwise punished, was 3,234 (3,531) males and 9 (10) females. Convict officers, as a rule, afforded much assistance in controlling prisoners and maintaining discipline. Their conduct is reported to have been generally satisfactory.

Statement XVII.

13. *Under-trial Prisoners.*—At the opening of the year there were 1,583 (1,318) of these prisoners under detention and 19,793 (18,508) were received during the year, making a total of 21,376 (19,826). Of these, 9,831 (9,115) were released, 9,695 (8,724) were convicted and sentenced, 512 (383) were transferred, 1 (0) escaped and 16 (21) died, so that the number remaining at the close of the year was 1,321 or 262 less than the corresponding figure for the previous year. This decrease is so far satisfactory as also the fact that the average period of detention per prisoner of this class has fallen to 26·11 days, compared with 28·57 days in 1927. In view of the large sum of money expended on the maintenance of under-trial prisoners, I reiterate the suggestion made in the Report for last year, *viz.*, that more use might be made by Courts of the powers of enlarging prisoners of this class on bail in view of the fact that so large a percentage of them are discharged after trial.

CHAPTER II.

FINANCIAL.

Statement IX.

14. The total expenditure incurred in guarding and maintaining prisoners during the year under report was Rs. 23,77,384 (Rs. 22,86,738), an increase of Rs. 90,646. The cost per head fell by Rs. 3-0-7 from Rs. 118-3-2 to Rs. 115-2-7, which is a satisfactory feature. Explanations of the variations in expenditure under several heads are furnished below :—

Establishment.—Expenditure increased by Rs. 46,013, due to (1) additional staff entertained in connection with the Alon Quarry Camp Jail.

(2) Staff entertained for the new Mokpalin Camp Jail and Kyaikto Subsidiary Jail.

(3) Increments earned by the staff.

Dietary Charges.—Whilst the total expenditure rose from Rs. 9,13,818 to Rs. 9,57,052 in the year under review, an increase of Rs. 43,234, the average cost per head fell from Rs. 47-7-8 to Rs. 46-9-9 in 1928. Of the additional expenditure of Rs. 43,234, the increased quantities of paddy and pulses in store at the end of 1928 account for Rs. 25,615, leaving a net figure of Rs. 17,619. When it is considered that we had to maintain 1297 more prisoners, the cost of feeding whom would amount to Rs. 60,552, it will be seen that the dietary section was run on most economical lines, representing a saving of Rs. 42,933.

With the exception of paddy, all other articles were again purchased at rates cheaper than the previous year as the appended table shows.

Article	Rate.		Quantity.		Cost.	
	1927.	1928.	1927.	1928.	1927.	1928

						+62,475

The increased quantity of paddy that it was necessery to purchase for the additional population accounts for Rs. 49,204 of the increased expenditure. The balance is due to the higher rate it was unfortunately necessary to pay for supplies of paddy. The position of stocks compelled us to buy in February 1928 when the market was high and advancing daily. When the purchases had been completed, the market slumped owing to the competitive prices at which supplies of rice from other countries were put on the world markets and Burma paddy remained at a cheap figure throughout the year. Had it been possible to foresee this slump in prices, only sufficient paddy to meet the immediate requirements would have been purchased in February. It is, however, impossible to forecast the course of prices and the trend might just as easily have been the other way.

Hospital Charges.—Rs. 66,759 (60,947). The increase of Rs. 5,812 was due to the larger daily average number of sick and to increased expenditure on account of sick diet and extras for patients.

Clothing and Bedding of Prisoners.—Rs. 1,13,643 (Rs. 1,18,688). In spite of the fact that 1,211 more convicts had to be clothed and provided with bedding, it was possible to effect a further reduction of Rs. 5,045 in the expenditure under this head. The cost of clothing 1,211 convicts amounts to Rs. 6,700 which, added to the saving of

Rs. 5,045, equals Rs. 11,745, representing the economy effected in the weaving section for which credit is due to the Textile Expert, attached to the Insein Jail.

Sanitation Charges.—Rs. 17,967 (Rs. 17,349). The small increase of Rs. 618 calls for no remarks.

Charges for moving Prisoners.—Rs. 85,047 (Rs. 1,11,193). The decrease of Rs. 26,146 was due to a smaller number of prisoners released under the ticket-of-leave scheme and those deported to the Andamans.

Charges for Miscellaneous Services and Supplies.—Rs. 1,06,714 (Rs. 99,331). The increase of Rs. 7,383 was accounted for by (1) increased expenditure on lighting due mainly to the Petromax lamps used at the Môkpalin Camp Jail, (2) a larger sum paid as money rewards for recapture of escaped prisoners and (3) the equipment of the quarters of the Jail staff at Mokpalin.

Travelling Allowance.—Rs. 32,460 (Rs. 31,293). The increase of Rs. 1,167 was due to unavoidable transfers among members of the executive staff.

Contingencies.—Rs. 54,426 (Rs. 46,659). The increase of Rs. 7,767 was due to (1) the payment of increased municipal taxes in certain jails, (2) the Telegraph Department having claimed charges on account of two bell connections at Moulmein for four years, (3) debiting gharry-hire paid to pongyis and other religious preachers to the head "Current Office Expenses" with effect from June 1927, (4) the cost of printed forms and registers supplied by the Superintendent, Government Printing and Stationery, Burma, being charged for for the first time and (5) provision of furniture to Mokpalin and Kyaikto Jails.

Extraordinary Charges for Live Stock, Tools and Plant.—The expenditure under this head rose from Rs. 16,404 to Rs. 26,247 in the year under review. The increase is mainly due to the equipment of the Mokpalin and Kyaikto Jails.

15. *Jail Dairies.*—The dairies worked at a profit of Rs. 1,503 against Rs. 3,889 of the previous year. The dairy at Insein that was working at a loss has been closed down and the livestock disposed of.

16. *Jail Garden.*—After meeting prison requirements valued at Rs. 1,20,746 (Rs. 1,10,194), the surplus garden produce sold to the public realized Rs. 11,424 (Rs. 12,345). The largest cash receipts were accounted for by Myingyan Rs. 1,171, Prome Rs. 1,114 and Bhamo Rs. 992. The Jails at Rangoon, Tharrawaddy and the Camp Jail at Môkpalin purchased vegetables to the value of Rs. 9,381. The estimated value of paddy, dhal, condiments and tamarind raised by prison labour was Rs. 57,170 (Rs. 56,420).

17. *Expenditure in guarding and maintaining Prisoners.*—Excluding the cost of building new jails, of additions, alterations and repairs, the total cost per head of average strength fell from Rs. 118-3-0 in 1927 to Rs. 115-3-0, a reduction of Rs. 3 which is satisfactory.

Statement X.

18. *Employment of Convicts.*—In the year under review there was a marked increase in the numbers under sentence of labour, the total advancing from 15,943 in 1927 to 16,962 in 1928. Omitting those sick, etc., who are unfit to work, we had the formidable total of 15,318 (14,391) for whom employment had to be found. This difficult task was rendered all the more so by reason of the time taken to extend the Alôn Quarry Camp Jail and to complete the construction of the Môkpalin Quarry Camp Jail. The extension to the former was not finished until October 1928 with the result that the average number of convicts employed there throughout the year was only 213, instead of 440 for whom accommodation was arranged. At Môkpalin the delay was more keenly felt as, whilst it had

Statement XI.

been hoped to have the full number of 1,100 convicts there for the greater part of the year, the average number for the year was only 413.

These delays also threw us back by a year in connection with the construction of extensions to Camp Jails, as it had been decided not to proceed with further schemes until the result of the original scheme had been proved a success. The past year is generally admitted to have been the worst for trade in post-war years. The low level of rice prices had a crippling effect on business generally and in this respect jails have not escaped the effect of the decrease in the buying power of the province. As a result of this decline in general prosperity, sales of manufactured articles to the public show a decrease of over half a lakh of rupees, whilst there was also a fall of over Rs. 6,000 in receipts from the consuming departments of Government. It is fortunate that we had the Quarry Camp Jails at Alôn and Môkpalin in part working order as the receipts from these helped us to some extent. This is an added reason for pushing on with such Government schemes for employing convicts on a large scale, so that this Department may not have to depend to such an extent as at present on public demand.

Moreover, if the consuming departments of Government would support and co-operate with the Prison Department in every way possible, we would be still more independent of outside support. The matter at present forms the subject of discussion with Government, and I am hopeful that orders will shortly be passed making it compulsory for consuming departments to obtain certain specified articles from jails and prohibiting their purchase outside without the sanction of Government.

19. *Nett Cash Earnings of Prisoners.*—The following figures show the cash results of the employment of convicts during 1928 as compared with 1927:—

Statement XII.

——	1927.	1928.
	Rs. A. P.	Rs. A. P.
Paid into treasuries being sale proceeds of jail manufactures and hire of convicts (including receipts from Quarry Camp Jails)	4,79,395 13 11	4,71,738 11 9
Closing cash balance in hand	1,937 15 4	2,010 5 3
Total ...	4,81,333 13 3	4,73,749 1 0
Deduct cash drawn from Treasuries on manufactured account *plus* opening cash balance ...	88,860 12 6	2,23,910 1 10
Nett earnings	3,92,473 0 9	2,49,838 15 2

From these figures it would appear at first sight that the result of the working of the manufacture department is much worse than that of last

year. This, however, would be an erroneous deduction as the figures given above do not take into account some important items. Owing to the decreased demand for manufactured articles, stocks of both manufactured articles and raw materials in jails have increased considerably, their value on the 31st December 1928 being Rs. 80,395 more than at the corresponding date in the previous year. Another important item is an increase of Rs. 26,000 in the amount of outstanding bills due to jails and not realized at the close of the year. A further item that adversely affects the figures of the manufacture department for last year is the inclusion in these accounts for the first time of expenditure incurred on temporary staff engaged in connection with the employment of convicts. This expenditure, which for the past year amounted to Rs. 19,000, was previously debited to the supplies accounts. The total of these three items alone is Rs. 1,25,394 and in the main they account for the difference of Rs. 1,42,600 between the nett cash earnings of 1928 as compared with 1927.

The predominating feature of the manufacture accounts is the increase in expenditure from Rs. 88,860 to Rs. 2,23,900. The contributory causes of this are (*a*) the inclusion of the wages of temporary staff engaged in connection with the employment of convicts already referred to, (*b*) the re-opening of the Boot Factory on which a nett expenditure of Rs. 24,300 was incurred, and (*c*) the reduced prices charged for prison clothing. As regards the re-opening of the Boot Factory the greater part of last year was spent in training the labour and it was not possible to undertake much in the way of supplying boots to the consuming departments of Government. A contract for 2,000 pairs of ammunition boots was entered into with the Commissioner of Police for which raw materials were purchased and the boots manufactured. At the close of the year delivery has been taken of only 500 pairs so we were unable to realize the income that would normally have accrued from the expenditure incurred. The balance of 1,500 pairs will be worked off during the current year. The reduced prices charged for prison clothing has mainly affected the accounts of the Insein Jail. With the appointment of the Textile Expert at the commencement of 1927, experiments were carried out with a view to arriving at the most economical quantity of twist required to manufacture prison clothing. Several experiments were made but action was not taken to adjust the prices of prison clothing until the amount of twist to be used had been finally decided upon. It was thus not until the early part of 1928 that the reduced rates were put into force and it would now appear that, as a result of this, the Insein Jail made a large profit on the prison clothing supplied to other jails in 1927. This is confirmed by a reference to the accounts of this Jail for the years 1927 and 1928. In 1927 the cash drawn from the Treasury was *minus* Rs. 52,000, of which the Boot Factory contributed Rs. 10,500, leaving a balance of Rs. 41,500. This

means that the value of prison clothing adjusted in 1927 exceeded the actual cash drawn from the Treasury by Rs. 41,500, which is accounted for, to a large extent, by the profit made on the prison clothing supplied to other jails.

The daily average number of convicts sentenced to labour in 1928 increased by no less than 1,211 and the impossible task of finding suitable and remunerative employment in jails for such a heavy increase in numbers, combined with a decreased demand for manufactured articles, accounts for the drop in the average cash profit per head from Rs. 24-9-10 in 1927 to Rs. 16-4-7 in the year under review. The average profit per head calculated as per column 6B of the Supplement to Statement XII, which takes into account the increased value of stocks, etc., actually shows no falling off. Whilst the figure recorded is Rs. 20-4-2 (Rs. 23-5-1) this would, as explained in the footnote to the statement, have been Rs. 23-10-0 if calculated on the basis employed in previous years. The decision arrived at in consultation with Government to reverse the figures in columns 4D and 5D makes a difference of Rs. 57,301 which is equivalent to Rs. 3-5-10 per head.

The nett cash earnings for the year under review, whilst falling short of last year's figures, are still better than the previous two years, *viz.*,

Year.	Cash earnings.	Average population.	Per head.
(1)	(2)	(3)	(4)
	Rs.		Rs. A.
1923 ...	2,38,856	13,278	17 15
1924 ...	2,21,536	13,379	16 8
1925 ...	2,28,758	14,000	14 15
1926 ...	2,48,640	15,797	14 7
1927 ...	3,92,473	15,943	24 10
1928 ...	2,76,218	16,962	16 5

For some years past we have had to contend with a steadily increasing population that has had to be employed, and in the year under review a further increase of over 1,000 in the daily average number sentenced to labour has to be recorded. The Burmese are not naturally an industrious race and it is well known that the average free labourer works no harder than is necessary to earn his daily food. The difficulties that are encountered in keeping such large numbers of convict labour hard at work need no emphasis, and the arduous duties of the supervising staff are intensified as the numbers increase. With a view to tightening up the control of the workyards and to maintaining the output from the increased number of convicts, Government was asked to sanction a special allowance for the Workyard Foreman of the Central Jails. This would have enabled me to select experienced and the most suitable jailors to take charge of the workyards without, in some cases,

depriving them of the Chief Jailor's charge allowance that they are entitled to under the time scale of pay. Some jailors naturally have a better aptitude for work on the manufacture side and as the proposal was made with a view to improving the work of the manufacture department it is a matter for regret that Government was unable to accede to my proposal.

In the past year decreased profits were more or less general, the only jails to show improved figures being Rangoon, Ma-ubin, Shwebo, Katha, Bhamo, Paungde and Mergui. The Thayetmyo, Myingyan and Shwegyin Jails were stationary whilst at the remaining seventeen jails the figures are worse. The Shwegyin Jail again heads the list of average earnings per prisoner sentenced to labour, the figures being Rs. 117-6-8 (Rs. 95-2-1). Other jails deserving of mention are—

	Rs.	A.	P.
Alôn Quarry Camp Jail ...	95	10	7
Mergui District Jail	59	7	11
Ma-ubin District Jail	48	9	3
Môkpalin Quarry Camp Jail ...	41	5	4

At all these Jails the main form of employment is extramural, such as laterite and stone quarrying, earthwork, etc., which confirms the opinion that I have often expressed that this is the most suitable and remunerative form of employment for convict labour.

Supplement to Statement XII.

20. *Result of the employment of Convicts.*—The financial results of the employment of convicts has been fully dealt with in the preceding paragraph. This Statement reveals more clearly the result of the working of the manufacture department for the year as it takes into account the increase in stocks that is the inevitable result of a year when demand is poor. The construction of the new Central Jail at Tharrawaddy has been practically completed so far as the buildings are concerned, but there is still a considerable amount of land reclamation to be done that will occupy the best part of this year. The value of jail labour employed under the Public Works Department at Tharrawaddy is Rs. 92,408 (Rs. 1,29,863-8-0). Convict labour was also employed by the Public Works Department for the construction of the Camp Jail at Môkpalin, the value of this being estimated at Rs. 51,525.

The Textile Department at the Insein Jail has progressed under the direction of the Textile Expert. A contract for the supply of 16,000 red *longyis* to the Police Department was secured at a rate of Re. 1 per piece less than that paid previously by the Police Department to outside contractors. Six blanket power looms and a milling machine have been installed with the object of manufacturing blankets of a suitable quality for the Police and other consuming departments. This is the first power section installed in the Textile Department and the result will be watched with interest. The reduced rates for prison cloth were maintained throughout the year which, in spite of the increased population that had to be clothed, resulted in an overhead saving on the year.

The Boot Factory, which was re-started in March 1928 under the management of Mr. Axe, has progressed satisfactorily. The prisoners have been carefully trained and the quality of boots now being manufactured has so far been found satisfactory. This department now holds the contracts for the supply of ammunition boots to the Civil and Military Police, the Town Police, and the Forest Department which, added to the requirements of jails, makes the annual demand approximately 15,000 pairs. As the past year was devoted mainly to the training of prison labour, the financial results furnish no guide as to what they will be in a full year of active operation. The accounts for the current year are being maintained on a commercial basis, which will clearly show the financial results of the working of the Factory.

The Quinine section of the Manufacture department of the Rangoon Jail was responsible for an expenditure of Rs. 18,508-9-0 (Rs. 386-4-9) with a cash earning of Rs. 23,258-2-9 (Rs. 19,166-7-3). The increase in expenditure was due to the purchase of 2,000 lbs. cinchona febrifuge powder during the year.

Statement XIII.

21. *Average nett cost per head.*—The nett cost to the State for the upkeep of its prisoners increased from Rs. 18,94,264-11-0 in 1927 to Rs. 21,27,545 in the year under review. The increase is largely due to the additional population, *i.e.*, 1,297 that had to be maintained throughout the year. That it was not possible to provide remunerative labour for such a large increase in numbers and thereby proportionately increase the manufacture receipts is also a contributary cause of the greater cost. This difficulty should gradually disappear as progress is made in the construction of Quarry Camp Jails as, with large numbers being drafted to places where there is permanent employment, it should be possible to employ the remaining population on normal jail industries. It is unfortunate that the rise in population should have coincided with such a bad year for trade as the combined force of two such strong factors has created an obstacle that could not easily be surmounted. The average nett cost per head of average strength calculated as per Statement XIII is Rs. 103-0-7 against Rs. 97-14-0 in 1927; but, as the method of calculation adopted in this Statement makes no allowance for the enhanced value of stocks in jails, it is not perhaps a fair review of the year's working. If a comparison of the past two years' work is made on the method of calculation adopted in column 6B of the Supplement to Statement XII, which takes into account stocks, etc., in jails, it will be seen that the average cost per head *minus* the average profit per head for 1928 is Rs. 94-14-5, against Rs. 94-14-1 for 1927. This shows that the improvement achieved in 1927 has been maintained.

CHAPTER III.

VITAL.

22. *Diet.*—That there is nothing wrong with the diet, which is according to the prescribed scale, is borne out by Statement B (appended to this Report) showing that, of the prisoners discharged from jails, 65·55 per cent. gained weight, while only 13·86 per cent. lost weight. Indeed, most of the non-official visitors, who have interested themselves in the matter of the quantity and quality of the food, have remarked that a prisoner is certainly as well fed as the average villager outside. No disease whatever, ascribable to faulty dietary, was noticed by Medical Officers in charge of jails. The periodical issue of pickles, made from garden produce in the shape of limes, mangoes, etc., is no doubt appreciated by the prisoners.

Statement VIII.

23. *Water Supply.*—The tube well at Shwebo, sunk to a depth of 145 feet, was completed during the year, but is not up to expectations. The analytical report showed that the water is hard, that the chlorine and the total solids are high, and that traces of nitrates suggest the water being liable to sewage contamination. The Medical Officer is endeavouring to remedy these defects and improve the quality of the water. But the main trouble is the deficiency in the quantity of water pumped up. The recuperating power of the well is so slow that it is doubtful if the well can be considered a success. At Moulmein the new tube well was installed with a pumping engine; the jail now has an independent and efficient water supply. The tube wells sunk by the Bassein Municipality not having proved a success, the project of providing the jail with a tube well has been temporarily postponed; half way between the jail and the river, a tube well is being sunk by private enterprise, and the result is awaited. If this proves satisfactory, the question of sinking a tube well in the Bassein Jail will be reconsidered. The water supply at Insein is obtained from the new tube well sunk at a cost of Rs. 2,700. By means of a compressor engine the water is pumped into a tank of somewhat small dimensions on ground level. From this tank, the water is pumped into two overhead reservoirs and from there distributed to the various sections of the jail. To ensure provision of a good supply of water, sufficient for all practical purposes, an estimate amounting to Rs. 7,700 has been prepared for sinking one additional 6" tube well at Insein and the installation of an electrically driven centrifugal pump, with necessary pipe connections; but the project is held in abeyance for want of funds. The question of providing the new Central Jail at Tharrawaddy with a suitable supply of water is under consideration. The Magwe Jail was provided with a double action kite motion pump which has been found to work satisfactorily and to improve the water supply.

24. *Employment.*—This subject is dealt with in Chapter II. All that needs to be said here is that the work on which prisoners were employed had no ill-effect on their health; prisoners noticed to be losing weight were singled out during the Medical Officers' weekly inspection parade, these prisoners being given a change of labour and special diet till they regained their normal weight.

25. *Clothing.*—All prisoners are provided with two suits each, a towel, a bathing slip, a blanket and a gunny covering. During cold or inclement weather, blanket *kurtas* (coats) are supplied for the use of weakly, old and infirm prisoners. In the central jails and larger district jails, the clothing and bedding are regularly sterilized in Thresh's disinfectors; in the smaller jails a contrivance known as the "Serbian barrel" and recommended by the Indian Jails Committee, 1919-1920, is used for the purpose.

26. *Conservancy.*—The dry earth system of conservancy is still in vogue. Soakage pits, for the reception of urine, are in general use except in a few jails where they were reported to be unsuitable for one reason or another. These pits are free from smell and do not attract flies.

27. *Ventilation.*—The following improvements were effected in the Thayetmyo Central Jail:—

(*a*) Provision of expanded metal ceiling and reinforcing the existing expanded metal walling of the female ward.

(*b*) Demolishing the partition walls in the yards of four solitary confinement cells.

28. *Vaccination.*—Of 36,846 (29,718) prisoners vaccinated, 2,263 (1,242) were primary and 34,583 (28,476) were revaccinations. The percentage of successful cases was 69·33 (86·15) of the former and 55·09 (48·81) of the latter. Small-pox accounted for 21 (2) admissions and 6 (*nil*) deaths, 17 of the former being returned by Thayetmyo, 2 by Rangoon and 1 each by the Mokpalin Camp Jail and Mônywa. The deaths occurred at Thayetmyo; all the inmates of this jail were promptly revaccinated. The lymph used for vaccination was obtained from the Vaccine Depôt at Meiktila, and found to be of good quality.

There were 18 (42) admissions for chicken-pox, *viz.*, Rangoon 9, Meiktila 6, Insein 2, and Kyaukpyu 1, none proving fatal.

29. *Condition of prisoners discharged.*—The number released was 30,963 (29,845) of whom 65·55 (58·36) per cent. gained weight, 20·59 (28·32) per cent. neither gained nor lost weight compared with what it was on admission to jail, and only 13·86 (13·32) per cent. lost weight. These statistics amply prove that the jail population is well cared for, and points to the groundlessness of the complaint one occasionally hears to the effect that prisoners are over-worked and under-fed. The average gain per prisoner by weight works out to 3·65 lbs, and its percentage of original body weight is 3·29, this information is supplied in terms of the instructions conveyed in the Local Government's Judicial Department letter No. 84Z-.28, dated the 31st October 1928.

Statement B.

Though the figures given would go to show that conditions prevailing in jails are highly satisfactory as far as the prisoners' well-being is concerned, even the small percentage of 13·86, representing the number who have lost weight, needs further analysis. Loss of weight is often due to conditions over which the prison authorities have no control. Amongst them may be mentioned a few. The mental factor is very important. Almost every prisoner—especially a first offender—loses weight during the first few months of imprisonment. The sudden loss of liberty, the sudden imposition of unaccustomed discipline, the anxiety for the welfare of near relations and remorse for what the prisoner has done—all these are factors which tend to bring down the

body weight, but which cannot be attributed to any defects in the management of jails. Some prisoners come into jail with illness on them, some go out during the course of, or immediately after, an illness. In such cases if reasonable time were afforded, the prisoner would no doubt regain lost weight and put on more weight. But, through the accident of being released during a downward grade, such prisoners go to make up the number of those who have lost weight.

30. *Sickness and mortality amongst all classes of prisoners.*—A review of statistics for the past five years shows that (1) the prison population has steadily increased from 16,532 in 1924 to 20,644 in the year under report, (2) the admissions to hospital are the highest except for the years 1924 and 1926 when they numbered 15,594 and 12,307, respectively, (3) the daily average sick was 368, compared with 341 in 1924, and (4) the number of deaths is the highest on record, showing that the year was an exceptionally unhealthy one so far as the prison population is concerned.

Statement XIV.

Of the 514 deaths, 497 were among convicts, 16 among under-trials and 1 among civil prisoners. There were 3 deaths from cholera and 14 from plague. Accidental or sudden deaths were 8 in number, and there were 4 fatal assaults. As in the previous year, there was no case of suicide. Of the releases effected on medical grounds, 8 were classified as deaths, the prisoners concerned being in a hopeless state at the time of release.

Death rates in the several classes of jail.—The death rate per mille was as follows :—

(1) Central Jails 415 deaths ... 29·57 (16·92)
(2) District Jails 96 „ ... 16·53 (19·83)
(3) Camp Jails 2 „ ... 2·82 (*nil*)
(4) Subsidiary Jails 1 death ... 10·99 (*nil*)

Of the 415 deaths among Central Jails, Insein contributed 136 (76), Thayetmyo 97 (22), Mandalay 54 (22), Rangoon 50 (45), Bassein 24 (26), Myingyan 23 (18), Myaungmya 17 (12), and Tharrawaddy 14 (4).

Insein.—The deaths were due to tuberculosis 46, dysentery 43, nephritis 15, and pneumonia 11, the remaining 21 deaths being returned under various other heads of disease.

Thayetmyo.—Tuberculosis accounted for 29 deaths, dysentery 20, plague 10, colitis 8 and syphilis 6; 24 deaths were due to other causes.

Mandalay.—Dysentery and tuberculosis returned 8 deaths each, malaria and pneumonia 6 each, debility 4, and various other diseases 20.

Tharrawaddy had 3 deaths from enteritis, 2 each from anaemia and pneumonia, the remaining 7 deaths being caused by other diseases.

Rangoon, Myingyan and Myaungmya.—Compared with the previous year these jails had a comparatively small increase in the number of deaths while at *Bassein* the number was two less.

District Jails.—The number of deaths was lower than in 1927 at Toungoo 21 (24), Akyab 9 (25), Moulmein 8 (17), Prome 5 (7), Henzada 4 (5), Magwe 3 (5), Kyaukpyu 1 (3), and Bhamo 1 (2). On the other hand the number of deaths rose at Paungde 7 (4), Meiktila 7 (*nil*), Yamèthin 5 (3), Monywa 5 (1), Ma-ubin 4 (3), Pagan and Katha 3 (2) each. Four jails returned the same number of deaths as in the previous year, these being Tavoy and Mogôk 4 each, Thatôn and Mergui 1 each. At Sandoway, Shwegyin and Shwebo there were no deaths.

Camps Jails.—Mokpalin and Alôn returned one death each.

Subsidiary Jails.—The death occurred at Taungdwingyi among under-trial prisoners.

The health and other statistics of the 514 prisoners who died were as follows :—

215 (134) were admitted in good health.
77 (54) were admitted in bad health.
222 (157) were admitted in indifferent health.
12 (12) died within a week of admission.
5 (8) died within two weeks of admission.
16 (11) died within three weeks of admission.
4 (8) died within four weeks of admission.
477 (306) died after one month's imprisonment.

Twenty-two (29) deaths were among prisoners who had to be sent to hospital immediately on admission to jail. Of 76 prisoners removed to Civil Hospitals for surgical or other treatment, 15 died, and the remaining 61 returned to jail cured.

With regard to the age periods, 21 (16) were over 60 years, 149 (113) between 41 and 60 years, and 344 (216) between 16 and 40.

Health of prisoners repatriated from the Andamans.—Fourteen prisoners, belonging to this Province, were received from the Andamans on medical grounds. Each of them, except one afflicted with night blindness, was suffering from some form of organic disease which rendered him unfit for hard labour. One of them, a leprous subject, was released during the year and one ailing from pulmonary tuberculosis, died within fifteen days of his arrival in Burma. The remaining twelve are still confined in the Rangoon Jail.

31. *Admissions and Deaths among Convicts from the principal diseases.*—The following table shows, for the past five years, the number of admissions to hospital and deaths among convicts for the principal diseases:—

Statement XV.

Diseases.	*Ratio per mille of average strength.*									
	1924.		1925.		1926.		1927.		1928.	
	A.	D.	A.	D.	A.	D.	A.	D.	A.	D.
Cholera ...	0·79	0·46	...	...	0·56	0 33	0·45	0·39	0·16	0·10
Dysentery ...	30·12	0·65	21·01	0·56	39·39	2·34	32·67	3·68	45·80	5·75
Malaria ...	40·01	0·26	40·03	0·37	34 35	0·50	35·35	0·50	37·76	0·68
Pneumonia ...	4·05	1·11	5·51	1·05	5·01	1·00	4·85	1·56	7·57	2 30
Diarrhoea ...	4·39	...	2·97	0·12	5·06	0·45	3·62	0·28	7·83	0·37

A glance at these figures will show that for the past five years the admission and death rates for cholera are the lowest except for the year 1925 when there were no cases of this disease in jail. In all other respects the ratios are the highest, but for the admissions for malaria during the years 1924 and 1925, and deaths from diarrhoea during 1926.

Cholera.—There were 3 (8), admissions with 2 (7) deaths. Thayetmyo returned one fatal case and Ma-ubin two admissions with one death. The former, a sporadic

case, was promptly removed to the infectious diseases ward of the Civil Hospital, but died there the same day. At Ma-ubin two convicts were attacked. They were likewise removed to the Civil Hospital infectious ward for treatment. Only one convict recovered. The origin of the disease is obscure; but in the Thayetmyo case, it is believed that the prisoner, who was employed in the jail garden, ate raw vegetables which might have been contaminated. The first case at Ma-ubin occurred within forty-eight hours of the convict's admission to jail and the second case two months later. Cholera was epidemic in the district at the time. The precautions taken, which included inoculation of the whole population with cholera vaccine to prevent a spread of the disease at Thayetmyo and Ma-ubin, proved successful.

Dysentery.—Of the 877 (586) admissions with 110 (66) deaths, Central Jails contributed 685 admissions with 93 deaths and District Jails 192 admissions with 17 deaths. Calculated on the daily average convict population, the admission and death rate, per mille for Central Jails works out to 48·81 and 6·63, respectively, that for District Jails being 33·05 and 2·93, respectively. These figures show that, for some reason or other, the incidence of dysentery was far more potent in Central than in District Jails. Of the 93 deaths in Central Jails, Insein returned 43 (22), and Thayetmyo 20 (5), while the remaining six jails of that class accounted for 30 deaths. Nine of the District Jails returned a total of 17 deaths. The Public Health Department, at my request, investigated matters with a view to preventing, as far as possible, the high incidence of dysentery at Insein, and found that the local Municipality trenching ground, which lies between two and three hundred yards from the jail, was in a most insanitary state owing to no proper system having been followed in trenching. The night soil was tipped into pits irregularly dug by municipal coolies and lightly covered by earth. It was observed that every pit swarmed with flies which find their way to the jail. The epidemic of dysentery in the Insein Jail was aggravated by the existence of these flies and, from what I saw on the spot when the investigation was being held by the Director of Public Health, I concur in this view. A proposal was made that the trenching of night soil on behalf of the Insein Municipality be carried out by prison labour, free of charge, but had to be given up on the ground that, in the event of epidemics of cholera, dysentery, or enteric, there would be considerable risk of the infection being brought to the jail.

At Thayetmyo where 20 deaths occurred the fatal cases were mostly chronic, of amoebic origin, and did not respond to treatment. Many of them, it is reported, succumbed as a result of perforation of the intestines due to dysenteric ulcers. The preventive measures consisted of careful segregation and active treatment of the patients, disinfection and incineration of the dysenteric stools, and destruction of flies by means of fly traps, fly-killing and fly-paste.

Malaria.—There were 723 (634) admissions and 13 (9) deaths. Of the fatal cases, four Central Jails returned 11, headed by Mandalay with six. The Paungde and Mogôk Jails accounted for one death each. Of the 52 admissions at Mandalay, the majority of them were chronic cases, with enlarged spleens and other signs of malarial cachexia. Four of them (three Chinamen and one Burman) from the Northern Shan States were admitted to jail in very bad health and were directly sent to hospital. Another of the fatal cases was one of cerebral malaria. The sixth case was one of chronic malarial cachexia. In all cases of malaria, diagnosed microscopically at Mandalay, quinine bihydro-chloride was used intravenously and after subsidence of the attack the patients were kept in the quinine gang for varying periods.

As a rule, all malarial cases discharged cured are admitted to the hospital gang and given prophylatic quinine for a month or longer, if necessary. In all malarial stricken districts in which jails are situate quinine is administered twice a week to all prisoners throughout the year.

Pneumonia.—The number of admissions was 145 (87) and deaths 44 (28). Of the fatal cases, the eight Central Jails accounted for 32, seven District Jails for ten and the two Camp Jails for one each. At the Insein Central Jail, where there were 11 deaths, most of the patients were old or were suffering from some other intermittent disease like valvular disease of the heart, nephritis, veneral disease, etc. At Rangoon there were 35 admissions with five deaths. Four of the prisoners were in good health on admission to jail and one in indifferent health. All five deaths were due to lobar pneumonia.

Diarrhoea.—This disease accounted for 150 (65) admissions with 7 (5) deaths. All the fatal cases were returned by Central Jails, *viz.*, Myingyan 3, Insein 2, Rangoon and Tharrawaddy 1 each.

Tubercular Diseases.—These were responsible for 204 (180) admissions with 120 (72) deaths. Central Jails returned 172 admissions with 102 deaths, the figures for District Jails being 29 and 18, respectively. The Camp Jail at Mokpalin gave three admissions with no fatal case.

In the special Tubercular Ward at Myingyan, which has accommodation for 50, the number remaining at the close of the year 1927 was 29, and 81 were admitted for treatment, making a total of 110; of these, 34 were cured, 18 were discharged

otherwise and 28 died, so that the number remaining at the close of the year was 40. In his annual Sanitary Report the Superintendent of Jail, Myingyan, writes saying: "There were 34 arrest cases. Amongst these, there may be cases of wrong diagnosis. It is, of course, a difficult problem to diagnose early cases of tuberculosis. Some cases have progressed wonderfully on good diet combined with the general special treatment given to them. Several cases out of these were discharged to gangs where they subsequently went to the workyard or were released. One case of tubercular hip joint disease was transferred to the Main Jail Hospital for treatment." The Superintendent of Jail, Myingyan, mentions that seven cases died within a month of their admission to the special ward, seven more within two months, three within three months and four within four months, thus pointing to the necessity of early diagnosis of tuberculosis, and the need for prompt removal of patients to the Myingyan Jail for treatment. The majority of the deaths occurred during the rainy and cold seasons; most of the fatal cases were attacked with heart disease and general anasarca which hastened their end.

The high mortality amongst prisoners from tuberculosis can mainly be attributed to overcrowding in jails and points to the necessity of relieving the congestion. The accommodation at the Myingyan Tuberbular Ward is wholly inadequate for our needs with the result that tubercular patients had to be retained in jails which were unsuitable for the treatment of this disease. In order to relieve the congestion, a proposal for a "Jail Delivery" was accepted by Government and effect was given to the scheme after the close of the year, releasing a little over 1,300 prisoners. More accommodation is also being provided in the Camp Jails at Mokpalin and Alôn, and a separate Camp Jail at Kyidaunggan to accommodate 1,100 prisoners has also been sanctioned and will be built in due course. More and more volunteers are being sent to the Andamans, the operations of the Central Revisory Board have been extended so as to include more prisoners for release. All these measures will go to reduce the population which had become unwieldy of late.

Anaemia and Debility—Accounted for 125 (108) admissions and 9 (7) deaths. The ratio per mille works out to 6·05 and 0·4 respectively, compared with 6·02 and 0·39 in 1927. All the fatal cases were returned by Central Jails.

Enteric Fever.—Gave rise to 58 (66) admissions with 18 (13) deaths. The fatal cases were returned by Thayetmyo 4, Insein 3, Akyab, Rangoon, Mandalay and Myingyan 2 each, and Bassein, Myaungmya and Toungoo 1 each. At Thayetmyo the first case occurred among prisoners extramurally employed and the remainder among those working inside the jail. Two deaths took place one on 9th and the other on 18th April 1928, the third in August and the fourth in October 1928. The source of infection could not be traced. There was no relation between the three deaths at Insein, these having taken place at long intervals. At Akyab there were four admissions with 2 deaths compared with 14 and 5 respectively in 1927. Towards the end of the year there was a mild epidemic of enteric in the Rangoon Jail, most of the cases being paratyphoid B. The special features of these cases were the absence of abdominal symptoms with a general complaint of pain in the joints. The exact cause and origin of the epidemic was not traced. As many as 150 cases were reported from Mandalay Town whilst only 4 occurred in jail, two of which proved fatal. The source of infection was not discovered. At Myingyan the first case was admitted to hospital on 14th September and his temperature rose steadily for four days when the prisoner died. Post mortem examination confirmed the diagnosis. The second case was a ward assistant who caught the infection. He had received T.A.B. inoculation on the 11th September 1926 and again on the 4th September 1928. He developed typhoid all the same and died on the 14th November 1928. He had a number of ulcers in that portion of the ileum which adjoins the ileo-caecal junction; a portion of the middle of the right lung was found consolidated.

Beri-Beri.—There were 11 (7) admissions with no deaths, the cases being returned by Rangoon, Bassein and Mandalay 3 each, and Myaungmya and Mônywa 1 each. I am glad to be in a position to note that this is the third year in succession that the Pagan Jail has been free from this disease, thanks to the recommendations made by Colonel MacCarrison, C.I.E., M.D., I.M.S., in the matter of dieting the prisoners at Pagan with the object of preventing the recurrence of beri-beri at this small jail, which, in former years, returned a number of these cases, some of them proving fatal. Of the 11 admissions for beri-beri, 7 were among prisoners received from Police Lock-ups. Apart from this, and with a few other exceptions, there was a general improvement in the health of prisoners admitted to jail from Police Lock-ups.

Plague accounted for 18 admissions with 12 deaths, the jails affected being Thayetmyo and Mandalay. The former returned 16 admissions with 10 deaths and latter two cases which proved fatal. In the early part of the year plague manifested itself in the Thayetmyo Jail. The patients were segregated and treated in the hospital cells. Of the 10 fatal cases, 9 had been inoculated previous to the outbreak. At Mandalay, the first case was admitted to hospital for pneuomonia, but plague bacilli

were found in the patient's sputum, and he died very soon after. Next day another prisoner was attacked, and he succumbed within forty-eight hours. On the first case occurring all the contacts were segregated immediately and the hospital buildings, bedding and clothing were promptly cleansed, washed and disinfected. Two rats, which fell from the roof of a work-shed, were found infected. All work was soon stopped, and the whole jail was cleaned. As a result of energetic ratting op erations, seventy-nine rats were caught within forty-eight hours, seven of them being found infected with plague bacilli. Both at Mandalay and Thayetmyo the whole prison population and the jail staff, with their families, were protected by inoculation, the epidemic being thus nipped in the bud.

Ankylostoma infection gave rise to 4,444 (4,140) admissions with 6 (0) deaths. The fatal cases were returned, three by Mandalay and one each by Moulmein, Toungoo and Magwe. All prisoners newly admitted to jail were examined thoroughly and their stools searched microscopically for ova. All prisoners found positive were detained in hospital, or in a seperate ward, and subjected to ordered treatment.

32. *Opium consumers.*—1,998 (2,010) or 8·63 (8·76) per cent. of the convicts admitted to the jail were addicted to the opium habit. The highest percentages are returned by Bhamo 78·99, Katha 43·07, Myaungmya 28·52, and Ma-ubin 20·21.

33. *Mortality among convicts according to length of time passed in jail.*

Statement XVI.

The death rate per mille was highest amongst convicts who had been in jail for more than three years but not exceeding seven years 44·83 (14·06), followed by those detained for over one year but not more than two years 34·48 (21·07), for more than two years but not exceeding three years 28·21 (16·01), for not more than six months 19·37 (19·40), for more than six months but not more than one year 19·18 (15·54), and for more than seven years 17·69 (24·88).

34. *Health in Camp Jails.*—This is our first experience of Camp Jails. There were two of them, *viz.*, at Môkpalin, (Thatôn District) and a Alôn (Mônywa District). The conditions at these two jails varied. Môkpalin which is not very far from Moulmein, is situated in the moist zone with a very heavy rainfall (about 250 inches per annum). Alôn is in the dry zone with a small rainfall. The work at both these jails is heavy consisting of laterite quarrying, or stone-breaking, or both. The work, moreover has to be done entirely in the open. The jails themselves are constructed like Prisoners of War Camps, with barbed wire aprons instead of the ordinary walls of a jail, and *kutcha* huts to live in. The health of the prisoners has so far been very good in spite of the exposed nature of the work and other strenuous conditions. It has to be admitted that all prisoners sent to these jails are specially selected and have to be fit for hard labour. All the same, the open-air life and hard work have proved, from the health point of view, far better than conditions obtaining in ordinary jails. Apart from illness due to the nature of the work, such as sores on legs caused by flying chips of stone, due mainly to carelessness on the part of the prisoners, there has been very little sickness. It is hardly necessary to add that the health of prisoners receives close attention and those who are unfit for the nature of the work involved are promptly transferred to other jails.

35. The chart at the end of this Report shows, at a glance, the health statistics of the Jails of Burma for the past five years.

CHAPTER IV.

MISCELLANEOUS.

36. *General Observations.*—The provincial death rates for India, including Burma, have a succession of ups and downs ; but it is with much regret that I have to record that, in spite of the assiduous care and attention which Medical Officers have devoted to sanitation and the health of the prisoners in their charge, the death rate in Burma has reached the high figure of 24·90 per mille.

Reviewing the mortality for the past thirty years, taking periods of ten years at a time, it is found that it dropped from 18·93 per mille in 1899 to 11·88 per mille in 1907, with a small rise to 13·27 per mille in 1908 ; during this decade and the following two years the daily average population was well below the total accommodation available for all classes of prisoners. During the next ten-year period the lowest death rate, *viz.*, 11·98 per mille, was returned in 1910 and the highest, *viz.*, 25·59 per mille in 1918, during the latter part of which year this Province was visited by a very severe epidemic of influenza, the likes of which has never been experienced in Burma. During the years 1911 to 1916, both inclusive, there was continuous overcrowding although additional accommodation was provided for 1,617 prisoners in the course of those years. Some relief was afforded by the opening, on the 8th April 1917, of the Extramural Jail at Maymyo which received 556 convicts and by the conditional release, during that year, of 816 prisoners for employment on various works, the Wolfram Mines Concessionaires at Tavoy absorbing most of them. With slight fluctuations the mortality dropped, in 1925, to the creditably low ratio of 10·30 per mille. It may here be noted that during the years 1917 to 1925 there was no general overcrowding. Since the year 1926 the jails of this Province have been seriously overcrowded notwithstanding the conditional release of large numbers of prisoners for ticket-of-leave employment under the Public Works Department and the subsequent opening of two camp jails. Between the years 1917 and 1928 additional accommodation was provided for 3,150 prisoners. In spite of this relief the death rate rose from 14·58 per mille in 1926 to 17·83 per mille in 1927 and to 24·90 per mille in 1928.

As several factors come into play, it would be unwise to dogmatise on statistics relating to mortality ; but what prominently manifests itself is that whenever there is overcrowding the death rate goes up. This view is supported by the fact that the mortality in the central jails, which were seriously overcrowded, rose from 16·29 per mille in 1927 to 29·57 per mille in 1928, while that in the district jails, which were not badly congested, showed a fall of 3·30 per mille. The conditions obtaining in the jails of this Province have not varied from year to year. The same attention was paid to sanitation and general hygiene, to feeding, to clothing and the care of the sick as in previous years ; still the number of deaths has increased. A lesson to be learnt in this connection is that one must prevent, as far as possible, congestion in enclosed spaces like jails, and that the likelihood of overcrowding should be anticipated, proper measures being taken in time to guard against the same.

37. *Accommodation.*—Exclusive of hospitals and observation cells, the total accommodation available for all classes of prisoners at the close of the year was 19,939 (18,971), the increase being accounted for by the additional accommodation for 403 provided at the

Statement A.

new Central Jail at Tharrawaddy which was practically completed during the year, the Camp Jails at Môkpalin 1,100 and Alôn 215, and the Kyaikto Subsidiary Jail (taken over during the year) 50. From these figures must be deducted 800 representing the temporary hut accommodation erected in the Tharrawaddy Jail while it was in the course of construction, these huts having been removed when the jail was nearing completion. While the accommodation available for undertrial and civil prisoners was more than ample for all practical purposes, that for convicts was sorely taxed in nearly all the jails of the Province, relief being afforded, as far as possible, by transfers to less overcrowded jails and by a local re-distribution of the convict population. In February 1928 I addressed the Local Government suggesting that, as is done in the Province of Madras, semi-pucca huts be erected in jails where there is room for them, so that the excess population might be lodged in those huts which could be utilized whenever necessary, and the best possible arrangements made for the employment of the surplus convict population at those jails; but the proposal, as a general measure for affording relief, was negatived on the ground of the expense involved and in view of the fact that two camp jails were about to be established. The Local Government, however, decided that, in the case of Tharrawaddy Central Jail, which was under construction at the time, temporary accommodation for 800 prisoners, erected there, should be made use of for the present.

38. *Progress of Education in respect of Juveniles under 18 years of age sentenced to one year and over.*—Of the 394 (361) prisoners of this class admitted to jail during the year, a daily average of 271 (281) underwent secular instruction. Of the 249 juveniles released, 31 were, on admission to jail, able to read or write, 36 able to read only, and 182 were illiterate; whereas, on discharge from jail, 188 were able to read or write, 33 able to read, and only 28 were illiterate. This progress is so far satisfactory.

39. *Juvenile Jail at Meiktila.*—The year opened with 148 juvenile convicts and 188 were admitted during the year, making a total of 266; of these, 26 were transferred to other jails, 82 were released, 1 escaped, and 7 died, so that the number remaining at the close of the year was 150. The daily average was 155. The discipline of the boys was not so favourably reported on, by the Superintendent of the Meiktila Jail, as in former years. I am not surprised at this as, during my inspection of the Jail in August last, I found that, from the point of view of prison offences, the juvenile jail is no better than an ordinary jail. There were too many cases of insubordination, disobedience and petty assaults, and the smuggling of prohibited articles seemed to go on as usual. On a close examination of the situation, it was discovered that sufficient attention was not paid to weeding out undesirables. On my bringing this important matter to the notice of the Committee of Visitors, steps were taken for the transfer of twenty-six "incorrigibles" to adult jails where separate accommodation is provided for juvenile convicts. Boys belonging to the "Special grade" are taken out once a week on route marches, accompanied by the Superintendent, the Chief Jailor, or the Deputy Jailor, other escort being dispensed with. As in former years great importance is attached to physical culture; the boys are taught company drill, and training in scout craft continues apace, thanks to the energetic Scout Master U Ba Shwe. The youths are instructed in carpentry, cane work and rope making; but on account of its crudeness it is found difficult to dispose of their handiwork, with profit to the Jail. They are educated up to the fourth standard, and the examination results for the year were satisfactory, thus reflecting credit on the two paid teachers. Among the inmates of the Jail is a youth (awarded a sentence of 20 years under section 307 of the Indian Penal Code) who with the permission of the Local Government, is to appear for the High School Final Examination to be held in March 1929, and is being coached by the Head Master and Second Master of the National Aided High School at Meiktila.

Besides the garden in which are employed a number of short term juveniles there is a seed farm attached to the Jail and supervised by the Deputy Director of Agriculture, Myingyan Circle, Meiktila. This farm is under the direct management of a trained Burman subordinate who imparts theoretical as well as practical instruction to the youths who take an interest in agricultural operations. The farm is reported to be run at great loss to the Jail, and the question of closing it will have to be considered if further experiment proves unprofitable.

In the report for 1927 mention was made of the Local Government having sanctioned the employment of eighty lads on the work of constructing a tank at Htilaing, a few miles away from the Jail. I regret to say that the scheme had to be abandoned, the result of chemical examination having been most unfavourable to the site selected for the purpose; it was also adversely reported on by the Geological Survey Department.

The Committee of Visitors continued to take much interest in the management of the Jail, and I am greatly indebted to them for the valuable services cheerfully rendered by them during the year. It is unnecessary for me to add that the existing institution at Meiktila is only a makeshift. A training school for young delinquents is a highly specialised institution requiring a trained staff, and cannot be managed efficiently by amateurs. Financial stringency has, for years, stood in the way of this urgent reform in the criminal administration of this Province, and I can only reiterate the hope, which I have ventured to express year after year, that Burma will soon have up to date institutions of this kind.

40. *Imposition of Fetters.*—As a means of punishment, fetters were imposed on 2,277 (2,320) prisoners. For safe custody they were used on 2,546 prisoners, against 2,828 in 1927.

41. *Remission System.*—The number of convicts released under the remission rules was 9,608 (9,177). Five convicts (the same number as in the previous year) who were entitled to the benefits of the remission system failed to earn any remission. The maximum remission earned was

Statement C.

885 days by a convict at Rangoon sentenced to over five years. 6,213 (5,713) were awarded special remission for having been free from punishment for a year: 21,438 (18,633) earned special remission for other reasons. These figures include 133 (49) prisoners granted special remission on the recommendation of the Central Revisory Board and 501 (446) prisoners who were free from punishment for over three years. The rules regulating the grant of remission are thoroughly understood by all prisoners.

42. *The Burma Prisoners' Aid Society* has been in existence for the past six years and has done good work. Its funds have run so low that it was contemplated, during the year under review, to close down the "Shelter" in which released prisoners are accommodated while they are in search of employment. The "Shelter" is under the supervision of the Salvation Army authorities, who have kindly appointed a caretaker for it. Unless the charitably disposed public come forward with donations to supplement the Society's funds, which are at a low ebb owing to there practically having been no income for the whole year, it is feared that the meritorious work done in the past will have to be discontinued. During the year thirty-seven prisoners availed themselves of the "Shelter"; of these, sixteen obtained employment through the kindly aid of the Salvation Army authorities. A number of these prisoners were helped financially; a few were sent back to Calcutta and Madras, deck fares being provided for the purpose, and others were sent to places in Burma, outside of Rangoon, where they hoped to be able to obtain work. The total amount spent by the Prisoners' Aid Society on this account was Rs. 549-4-0.

43. *Suicides and Accidental Deaths.*—There were no cases of the former, but there were four attempts at suicide which were frustrated. There were a total of eight accidental deaths, *viz.*, convicts 6, undertrials 1 and civil prisoners 1. Details of these deaths were reported to the Local Government, who was also furnished with the inquest preceedings relating to these cases.

44. *Religious Services.*—1,766 (1,648) religious services were held during the year, *viz.*, 1,563 for Buddhists, 96 for Christians, 62 for Mohamedans and 45 for Hindus. Prisoners are said to have taken an interest in these services and appreciated the preaching of their ministers. At five jails, *viz.*, Rangoon, Thayetmyo, Akyab, Mergui and the Alôn Camp Jail, the prisoners were provided, on festive occasions, with special food prepared from dietary articles supplied by charitably disposed persons.

45 *The Salvation Army Juvenile-Adult Criminal Institution.*—This Institution has accommodation for thirty conditionally released youths. Of the twenty-four received on transfer from the Rangoon Jail, two were remanded for bad conduct; but the general behaviour of the boys is reported to have been satisfactory. There has been a decided improvement in the quality of the furniture made at the Institution, this being partly brought about by the Rangoon Jail having supplied three or four very good carpenters. The authorities have had no trouble in disposing of the articles of furniture manufactured by the boys. Among the improvements effected during the year are the provision of aluminium cups and plates and thirty iron bedsteads, these latter replacing the bug-infested wooden cots previously in use. Many of the boys, who have been released, have visited the Institution and stated that they were settled once more in their old homes, or in new surroundings, and are doing well. An effort has been made by the Superintendent in charge to keep in touch with the boys released from the Institution, but this is said to be difficult as they do not write more than once or twice.

46. *Buildings.*—The following are the important works completed during the year :—

(1) *Insein.*—Providing a *pucca* floor to one of the workyards.
(2) *Alon.*—(*a*) Constructing a workyard at the Shabyedaung Camp Jail, and (*b*) other additional works in that jail.
(3) *Toungoo.*—Providing horizontal frames along the top and bottom of the palisading in four sleeping wards.

The following works were in progress at the close of the year :—

(1) Improvements and additions to the Kyaikto Subsidiary Jail.
(2) Additions to the Mawlaik Subsidiary Jail.

47. *Inspections.*—Lieut.-Colonel C. H. Fielding, I.M.S., formerly Superintendent of the Rangoon Central Jail, acted as Inspector-General of Prisons until my return from leave on the 28th January 1928. On that date I relieved him, and con tinued to be in charge of the Department to the end of the year. Excepting Shwegyin, all the jails in the Province were inspected by me, duri ng the year, or by the Supervisor of Jail Industries in my behalf, the permission of the Local Government having been obtained to his inspecting the smaller district jails on my account. He inspected the Shwegyin Jail on the 28th February 1929. He visited eleven jails during the year. His Excellency, the Governor, paid a visit to the jails at Rangoon, Bassein, Myaungmya, Thayetmyo, Myingyan, Moulmein, Toungoo, Ma-ubin and Meiktila. The number of visits paid by officials was 349 (351) and by non-officials 485 (623). There is a marked falling off in the number of visits paid by non-officials. The jails at Prome, Paungde and Taungdwingyi were sadly neglected in this direction, not a single visit having been paid to them.

48. *Audit of Accounts.*—The supplies accounts of eight Central Jails, the manufacture accounts of twenty-three jails and the warders' increment registers maintained at twenty-one jails were checked by officers of the Audit Department. At all jails, except Insein, Mandalay, Myaungmya, Thayetmyo, Myingyan, Moulmein and Mogôk, the accounts were reported to have been kept satisfactorily. In view of the instructions issued to the Superintendents of the seven defaulting jails and the disciplinary action taken against the jailors concerned, whose slackness is mainly to blame for the mistakes brought to light, I expect to find improvement in the maintenance of the accounts when they are next audited.

49. *Jail Revisory Board.*—Though this Board has been working for over five years, there still appears to be some misconception in the minds of

local officers as to the objects, functions and *modus operandi* of the Board. A few words by way of explanation, therefore, would perhaps not be out of place.

The Board is not meant to be a Court of Appeal, criticising the legality of sentences passed on prisoners. Its main function is to consider the cases of long-term prisoners at the prescribed period, and submit their considered opinion, in suitable cases, for the orders of the Local Government. More than half the cases coming up are rejected by the Board.

The Board is representative of all shades of opinion. It consists of a Sessions Judge, a District Magistrate, the Commissioner of Police, two non-official members who are both lawyers, and the Inspector-General of Prisons. Each case is considered from several points of view. A precis of the judgment is placed before the Board which is also informed of the age of the prisoner, how he has behaved in jail, what the Police authorities and the District Magistrate think about him, together with other facts of interests. The Board gives a good deal of weight to the opinion of the District authorities and rejects many cases in deference to their views. In the few cases in which the Board finds itself at variance with the views expressed by the District authorities, the opinions of the latter are also submitted to the Local Government, who is thus placed in possession of all material facts before passing final orders.

The institution of the Revisory Board is in keeping with the most modern views on the subject of imprisonment. All authorities are agreed that unnecessarily long imprisonment merely goes to demoralise the character of the inmate, and the members of the Board therefore attempt to place before Government suitable cases of prisoners who, to the best of their judgment, deserve early release, and who may be enlarged without danger to society. The Board is not unmindful of the effects of such release on crime in general and of the necessity of being cautious. In other words, their hearts are not allowed to get the better of their heads, as a study of the figures for the last five years will amply prove.

The Board continued its operations in the same manner as it did in the previous year, excepting that, in February 1928, the orders issued by the Local Government to the Board were amended so as to provide for the consideration of selected cases of prisoners sentenced under sections 395 to 402 of the Indian Penal Code. In May the orders were further modified with the result that the cases of prisoners of the following classes became eligible for consideration by the Board :—

(1) Casuals sentenced to imprisonment or transportation for life when they have served 12½ or 10 years according as they fall under class I, or class II and III.

(2) Casuals sentenced to imprisonment (including transportation, imprisonment in default of payment of fine, and imprisonment by Courts Martial) when they have served 1½ years or half of their sentences, whichever is greater.

(3) Prisoners (both casuals and habituals) sentenced to transportation or life who, at the time of commission of the crime, were less than 18 years of age, after they have served 7 years, including remission earned.

The number of cases considered by the Board was 2,061 and the results are shown below :—

Recommended for conditional release	489
Recommended for special remission awardable by the Inspector-General of Prisons	133
Recommendation withdrawn owing to objections raised by District Magistrates	55
Cases postponed for future consideration	100
Finally rejected by the Board	726
Cases still under reference to the District Magistrate concerned	548
Released before receipt of final orders from the Local Government	10
Total ...	2,061

The number actually released on the recommendation of the Board was 351. During the year four prisoners, conditionally released in previous years, were returned to jail for breach of conditions, or for fresh offences. Of the total number, *viz.* 2,315, conditionally released since the year 1923, only 97 or 4·19 per cent. have had their remission of sentence cancelled by order of the Local Government. The percentage of reconvictions among prisoners of the habitual class so released was 13·93, that for casuals being only 2·61. These results, which can be described as brilliant, go to prove that the Board does not recommend releases of unsuitable cases and that the recipients of the clemency, as a body, do not abuse the privilege.

I desire to place on record my high appreciation of the valuable services rendered by the members of the Board, both official and non-official. The demand on their time went on increasing day by day till they had to spend two mornings a week working on the Board.

50. *Release of Prisoners under the Ticket-of-Leave Scheme.*—At the commencement of the year there were three Ticket-of-Leave camps in existence, *viz.* at Satthwa, Salin and Môkpalin. The camp at Salin was closed on the 4th June 1928 due to a steady fall in the numbers, and the balance of 67 prisoners was transferred to the Satthwa Camp. The camp at Môkpalin was closed on the 1st August 1928 on account of the opening of the Môkpalin Camp Jail.

Particulars regarding the disposal of the prisoners released under the scheme are given below :—

(1)	Satthwa. (2)	Salin. (3)	Mokpalin. (4)	Total. (5)
Number remaining on 1st January 1928	407	252	159	818
Number conditionally released during the year.	266	115	...	381
Number received by transfer	117	...	...	117
Total ...	790	367	159	1,316
Number released on expiry of sentence.	397	201	99	697
Number transferred to other camps.	...	67	50	117
Number of escapes ...	63	83	1	147
Number remanded to jail ...	14	16	9	39
Number of deaths ...	10	...	...	10
Total ...	484	367	159	1,010
Number remaining at close of the year.	306	...	...	306

Of the 147 prisoners who escaped, 91 have been recaptured, and it is hoped that the remaining 56 will soon be accounted for. Except for a case of dacoity, in connection with which four prisoners of the Satthwa Camp were sent up for trial, three being convicted and one acquitted, the Ticket-of-leave Camps were free from any serious crime, a most satisfactory feature.

On completion of the work at Satthwa, the headquarters of the Camp were removed to Taungdwingyi where the prisoners were employed in constructing a trunk road to Natmouk, the length of the road being 25½ miles. The work involved earth digging and filling up follows, and in some places hill cutting. The rates paid to the prisoners was 13 annas and 6 pies per 100 c. ft., *i.e.*, 25 per cent. of the local rate. The total amount earned by the prisoners during the year was Rs. 46,755 excluding the 25 per cent deductions by the Public Works Department to meet overhead charges. The families of thirty prisoners are at present residing in the Camp. Some of the families work with their husbands, while others keep petty shops, for catering to the Camp's requirements. Of the 63 prisoners who escaped from the Satthwa Camp the majority were from among the new arrivals, and it appears that they volunteered for ticket-of-leave employment solely with the idea of escaping. It may here be mentioned that 32 of these absconders have been arrested and committed to jail. Thirty-five of the men who were time expired elected to continue working at the Ticket-of-Leave Camp and were permitted to do so ; twenty of them have since returned to their respective homes. The remaining fifteen

were still in Camp at the close of the year. The sanitation of the Camp is well looked after by U Tha Han, the Sub-Assistant Surgeon, in medical charge, and the water supply is of good quality. The health of the prisoners was satisfactory, though there were 10 deaths, *viz.* snake bite 4, cholera 3 (these seven casualties may be classed as accidental) and dysentery, malaria and diarrhoea one each. The total expenditure for the year amounted to Rs. 24,193-10-3 whereas, calculated on the average cost of maintenance per prisoner in jail, *viz.*, Rs. 115-1-11, the upkeep of 395 prisoners, which was the daily average for the year, would have cost Government Rs. 45,472-5-1. The Commissioner, Magwe Division, and the District Magistrate, Magwe District, who visited the Camp during the year, expressed themselves quite pleased with their inspection, the Commissioner remarking that it was difficult to believe that the men were all convicts with unexpired sentences, adding "The jail atmosphere was entirely absent and the hang-dog, subservient attitude, which characterises the jail-bird in the precincts of a jail, had quite disappeared." In concluding his interesting note on the Camp, the Commissioner, Magwe Division, remarked that the Deputy Superintendent in charge "U Kin Shu is to be congratulated on a very well organized camp," a remark with which I have pleasure in associating myself. U Kin Shu remained in charge of the Camp throughout the year and the good work performed by the prisoners and the absence of crime at the Camp are directly due to his capable management.

51. *First Aid Classes.*—From the report for 1928 on the work of the St. John Ambulance Association, Burma Centre, I regret to find that only two Superintendents of Jails held "First Aid" classes. I have again issued instructions to the Superintendents of twelve large jails for the early formation of training classes, and it is hoped that during the current year a good number of jailors, warders and convicts will secure certificates in token of having qualified in "First Aid." In February 1929 I received a petition from a Burman ex-prisoner, residing in a village of the Bassein District, asking for his "First Aid" certificate for which he had qualified while serving his sentence in the Henzada Jail. This would appear to indicate that a prisoner attaches some importance to being in possession of a certificate showing that he has passed in "First Aid". Another inference to be drawn is that since Burmans, as a rule, are apt pupils, they should ordinarily experience no difficulty in following the course of training, and in qualifying for "First Aid" certificates.

52. *Establishment.*—Day by day, prison work becomes more exacting ; more efficiency, more care and more attention to details are demanded on all sides ; but the old system of supervision still obtains. Out of thirty jails (excluding Camp Jails and Subsidiary Jails) only four are provided with whole-time Superintendents. The remaining twenty-six are held as collateral charges by the Civil Surgeon, or the Senior Medical

Officer of the Subdivision, as the case may be. As recommended by the Indian Jails Committee, *vide* paragraphs 29 and 33 of their Report for 1919-20, every jail, with a daily average population of 300 and more, should have its whole-time Superintendent. Signs are not wanting that part-time supervision of jails is responsible for a lot of the trouble that arises from time to time. Anyone who learns that a large jail is administered by an officer who can only devote a couple of hours or less to the work is amazed as to how the management is carried out. Anybody with a rudimentary knowledge of penology will have no hesitation in admitting that it is essential to have whole-time Superintendents for at least the central jails and the large district jails. Mr. Alexander Paterson, His Majesty's Commissioner for Prisons who, at the request of the Local Government, came out to Burma in November 1925, wrote saying that, as a result of jails not having whole-time Superintendents the real governance of such penal institutions "rests in the hands of the Chief Jailors," adding "This is a wholly unsatisfactory position and can only be defended on grounds of economy. The superintendence of a jail is a highly technical piece of work, a skilled profession in itself, and cannot be performed in a few hours by men wholly untrained for it, who are not selected by reason of their fitness for it, but slip into the part by the mere accident of their being Civil Surgeon in the area. They sign their names upon a hurried series of forms, they hear applications from and administer justice among prisoners whose language is usally a closed book to them. They are compelled to accept, from the Chief Jailor and his subordinate jailors, not only their interpretation of all that a prisoner says, but also their account of all that happens in the jail itself. Their conception of a jail rarely goes further than supposing all is well if the prison is clean, and the prisoners quiet, the accounts correct, and there are no escapes. They have neither the time nor the experience to face such a pungent question as to whether a man is worse or better for spending five years in their jail." Though I would not go so far as to say that all part time officers answer to this description, since many of them have succeeded in running their jails in a very efficient manner Mr. Paterson, on the whole, describes the general situation correctly. It may here be mentioned that the Registrar, High Court of Judicature at Rangoon, recently addressed me on the subject of the delays in a certain Central Jail in filing the appeals of prisoners. In this case the Headquarters Magistrate had to be placed in charge of the jail for a few months, and the departmental enquiry into the matter was conducted by him. At the instance of the Hon'ble Judges, the Registrar pointed out that it would appear to be scarcely right that an officer of the Subordinate Civil Service, who has numerous other duties to perform, should be placed in charge of a large Central Jail, and that it would seem that he was unable to supervise the work of the jail staff. I therefore hope that the scheme advocated by me in October 1927, for a service of whole-time Superintendents for all Central and large District Jails, will

materialize without much further delay. The only reason put forward for the present system has been that of so-called economy. No claim has ever been made that efficiency is ensured by such a system. But it is doubtful if even real economy is the result of the present arrangement. Apart from safe custody and general management, we are dealing with a large number of labour units, who have to be fed, clothed, and employed to the best advantage. Even if, by close supervision and personal attention, the whole-time Superintendent could increase the earnings of his prisoners by the small sum of half an anna per working day, the extra expenditure involved by the appointment of whole-time Superintendents would be easily made up ; if, on the other hand, the earnings could be increased by one anna per day, Government would have a handsome surplus which could be devoted to general improvements. There is no reason why, with the personal attention of whole-time and well-trained officers, the daily average earnings, per prisoner, should not increase by at least one anna per working day.

Another weakness in our system is in connection with the jail warders. Their numbers are inadequate and the quality poor. This subject has been discussed year after year. As there is a tendency to think that this Province employs more warders than would appear to be necessary, I made enquiries of some of the larger Provinces, and found the Government of Madras employs one warder for every 10 prisoners and the Government of Bengal one for every 11 prisoners confined in Central and one for every 10 prisoners in District Jails. But in Burma, the Central Jails have one warder for every 21 prisoners, the figures for District Jails and for all jails grouped together being 12 and 17, respectively. The Burman prisoner is well known to be far more mischievous and to need far more careful handling than any Indian prisoner. The proportion of warders should thus be larger in Burma than in other Provinces. When this disability is added to the fact that, owing to the smallness of the initial pay, we can recruit only the poorest type, the difficulties which the Department has to contend with can well be imagined. We have passed through another strenuous year with a large increase in the prison population. There was no corresponding increase in the staff, making their work very trying and arduous. The Central Jails particularly were sorely tried. When every officer was working at high pressure, it would be invidious on my part to mention only a few names. I therefore prefer to record my high appreciation of the way in which the whole department shouldered their responsiblities as they came.

Office Establishment.—The volume of work in my office has increased considerably owing to the multifarious activities of the Supervisor of Jail Industries to reorganize prison labour and improve the cash earnings. No special clerical staff was sanctioned on account of the appointment of this officer, and my office establishment has loyally and cheerfully

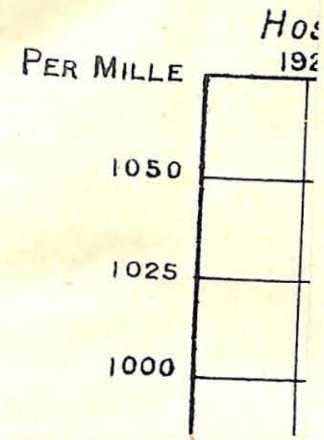

endeavoured to cope with the extra work involved. As the increase has grown out of all proportion, the need for assistance to the staff is very keenly felt. It is obvious that, with the little additional expenditure that will be incurred in this direction, it will be possible better to achieve the purpose for which the appointment of Supervisor of Jail Industries was created. It will also help to increase the cash receipts of the Prison Department, and any assistance thus afforded would eventually prove an economy rather than a source of additional expenditure.

53. The satisfactory features of the year are the opening of a Camp Jail at Môkpalin ; an increase in the number sentenced to whipping in addition to imprisonment ; there were no cases of suicide ; successful working of the Ticket-of-Leave Camp which operated in the Magwe District ; the extramural employment of a far larger number of prisoners than in previous years due to the opening of the Môkpalin Camp Jail ; a drop of Rs. 3 in the maintenance charges per prisoner.

54. The unsatisfactory features are an increase in the daily average number of prisoners of all classes, the figure being the highest ever recorded causing serious overcrowding among convicts ; an increase in the number of youths under 16 years of age committed to jail ; an increase in the number of offences dealt with by Criminal Courts and in the awards of corporal punishment by Jail Superintendents ; an increase in the number of admissions to hospital, daily average sick and deaths ; and a fall in the manufacture receipts.

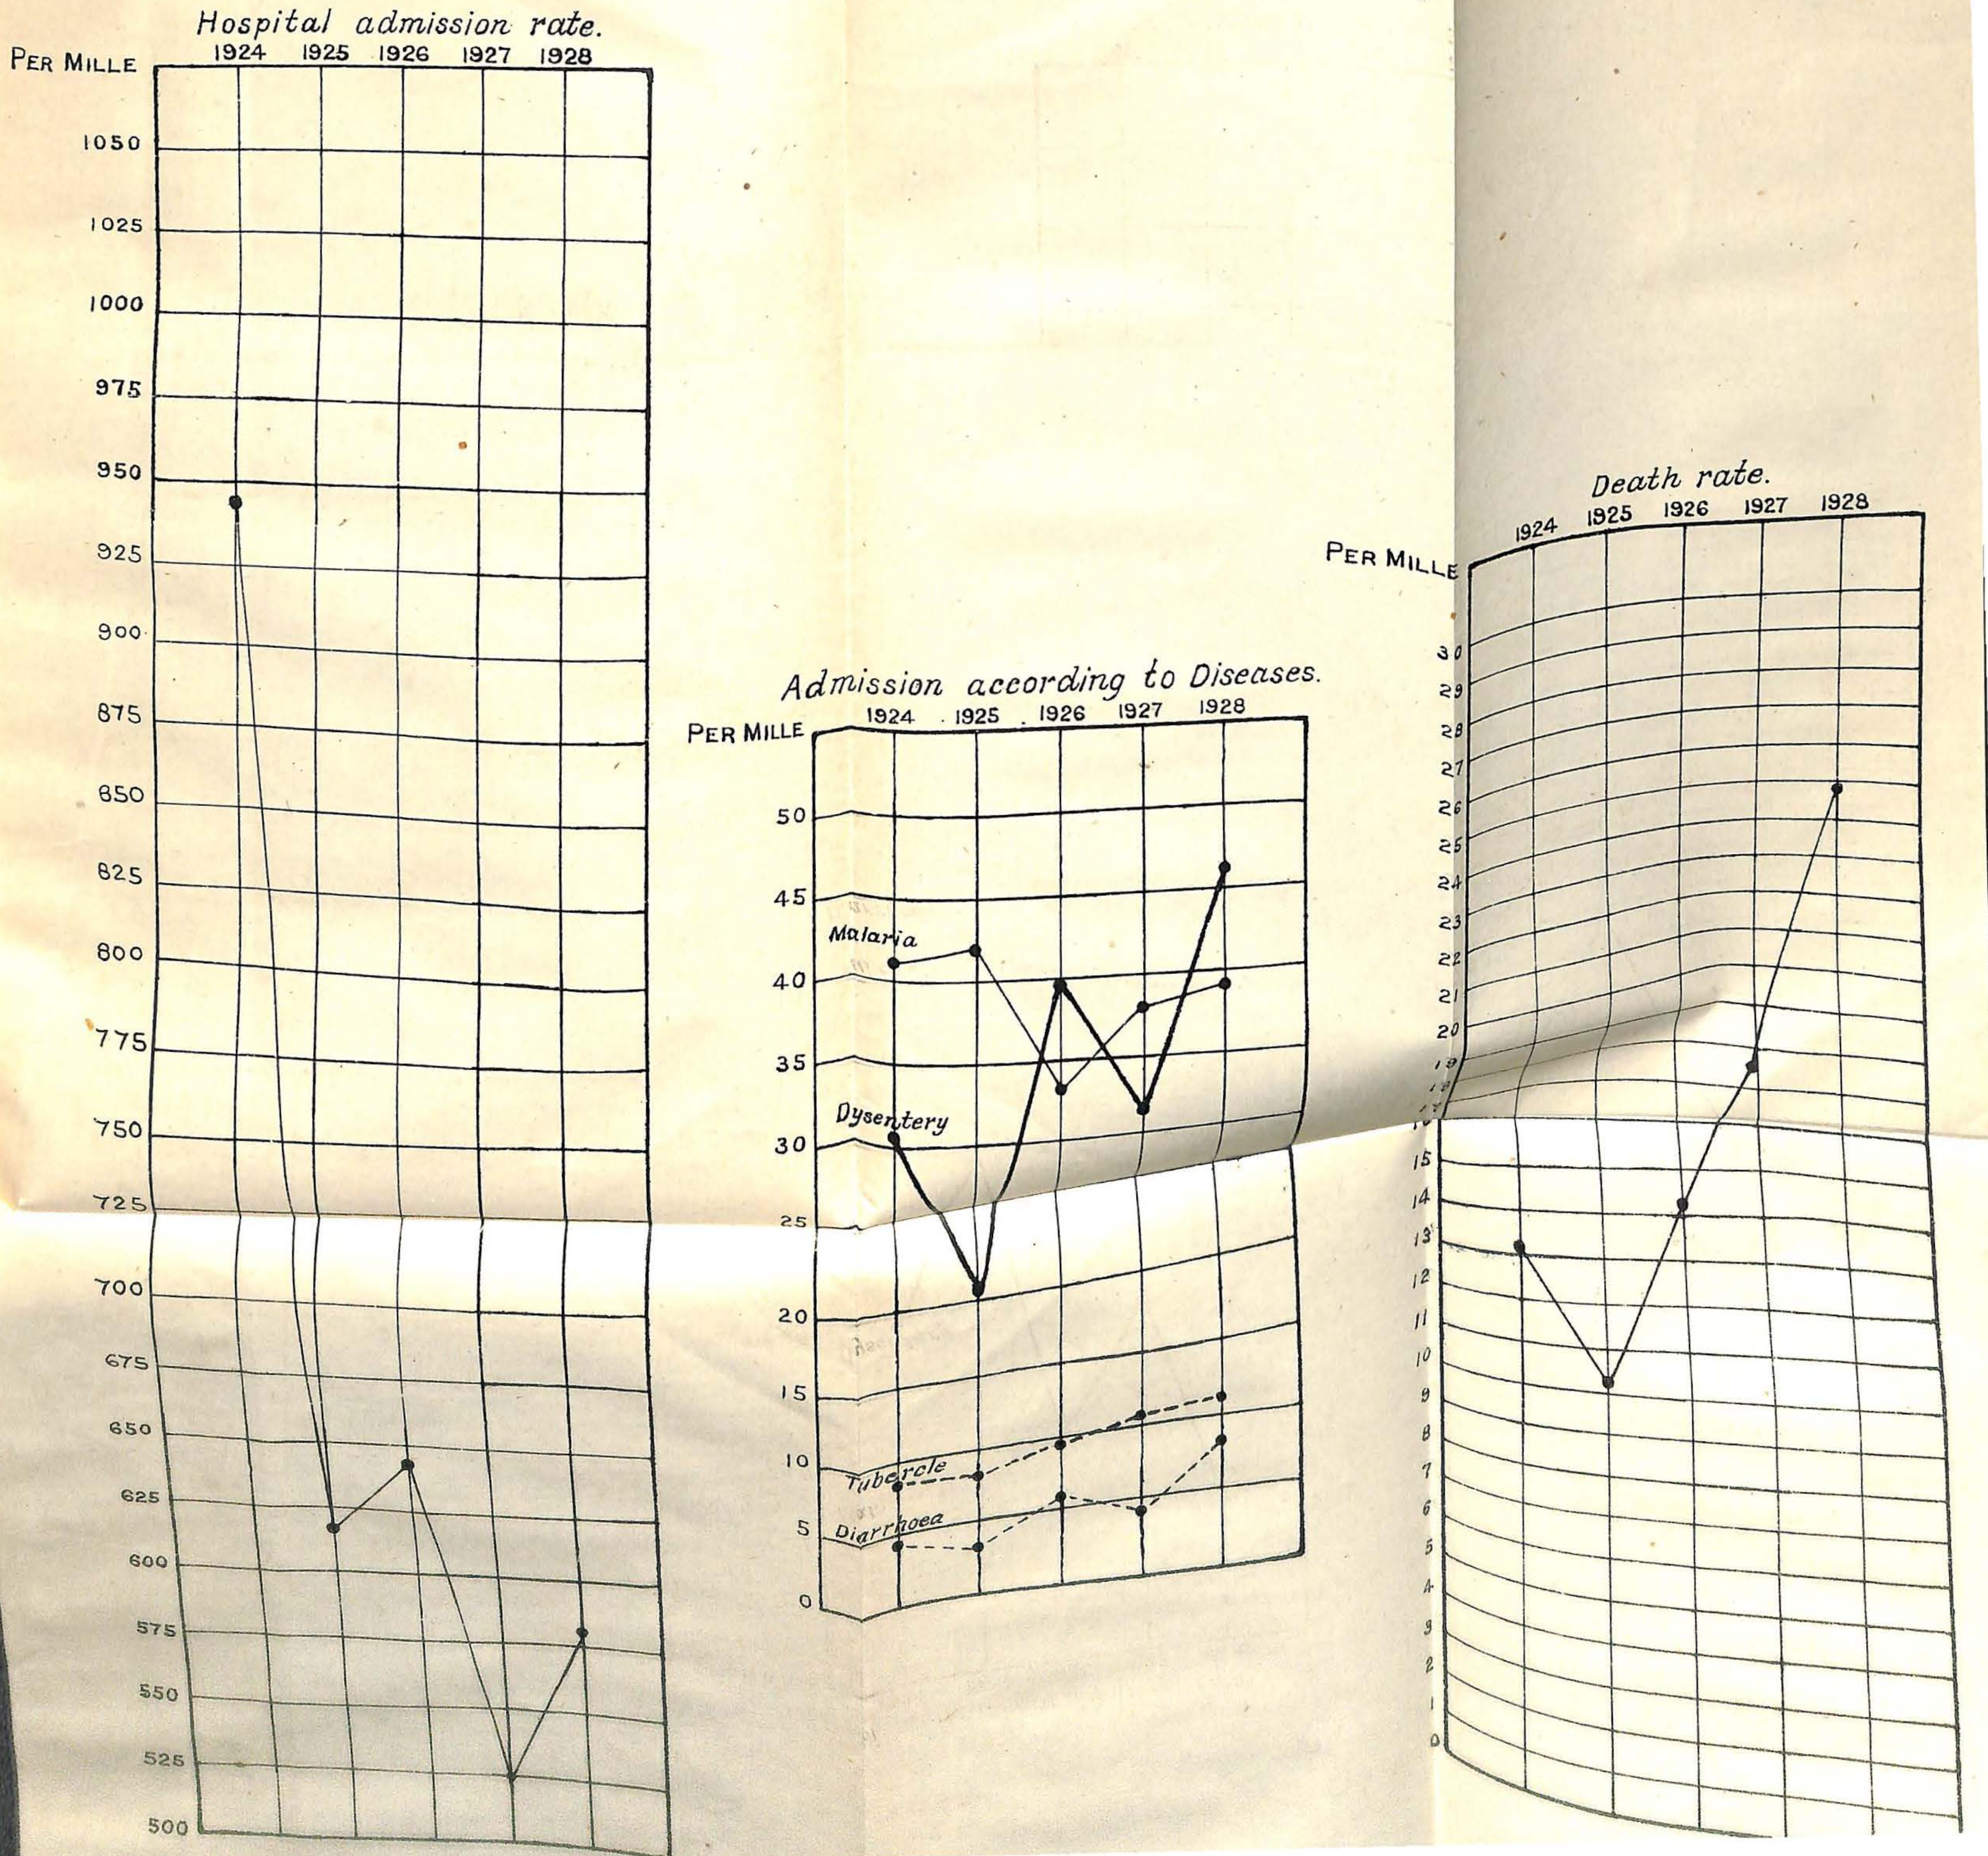

P. K. TARAPORE, *Lieut.-Colonel, I.M.S.*,
Inspector-General of Prisons, Burma
